

LocalMaps 3.2.6 Release notes

Bug fixes:

Reporting:

- Fix for login prompts for maps with secure layers.
- For private reports, the icon won't appear in viewer until the user is logged in.
- Report rich text font size now uses pt instead of px.
- Fix for template selection, in-line map placement.
- Fix included for table spacing.
- Reports no longer duplicate rows in the backend database on every save

Other:

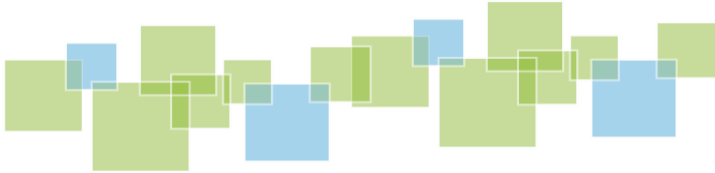

- Fix for infinite loop issue caused due to Google tags.
- Fix for search - starts with. exact match now works.
- Fix for search page scrolling issue in the administration panel.
- Fix for saved map pagination in Gallery.
- Fix for AE 11.x dashboard links in Gallery.
- Fix for search sources migration.
- Fix for search widget performance issues.
- (+) Button is docked in the add data widget.
- Layer search brings only the data points configured in the pop-up panel.
- Fix for suggestions appearing in Search widget when disabled.

New features:

- Configure authentication for reports with private data.
- Option to enable reporting auth on / off and choose the type of Authentication (listed below).
 - ArcGIS accounts with read only access.
 - Separate OAuth 2.0 Developer credentials.
- Secure print services can now be used in reporting.
- Option to set map-specific authentication under maps and apps.

Feedback addressed from the users:

- Map titles on galleries are now clickable.
- Configure gallery items default sorting in Admin
- Layer list now allows you to

- Turn on/off all layers
 - Expand/collapse all layers
- Admin can configure the default widget to open in Viewer.
- Admin can configure the number of items per page in Gallery.
- Save Child layers as part of the saved maps.
- Asynchronous print services can be used in Reporting.

Notable changes:

- Free text field has been removed in tables – Reporting. Layers need to be added as a data source to be used here.
